

Invitation

**Energy Globe
WORLD AWARD
+
Sustainable Cities
Conference**

**January 28 & 29, 2019
Yazd, IRAN**

**Yazd, The Global Capital of
Sustainable Cities**

Monday, January 28th

08:45 Opening of the Energy Globe Conference "Sustainable Cities and Communities"

- Greeting

09:15 The targets of the UN program "United Smart Cities"

- Sustainability in Yazd, 1000 years ago and tomorrow

10:05 Break

10:25 "Optimizing of Waste management"

- Structure and Organization of an Optimized Collection of waste
- Recovery and Recycling of Waste as Sustainable Business case
- Global Best Practice Examples

11:20 "Clean Water, a Precondition for Life"

- The Production of Drinking Water and Transport without Deficit
- Optimizing of Water consumption by Using New Technologies
- Global Best Practice Examples

12:15 Interactive Global Discussion by Livestream

12:30 Lunch

14:00 The important Role of Municipalities for the Implementation of Sustainable Acting

14:25 "Strategies against Air pollution"

- The Climate Change as a Global Challenge for Cities and Communities
- The Smart Reduction of Air pollution by Using Global Knowledge
- Global Best Practice Examples

15:20 "Sustainable Tourism"

- Sustainable Tourism Saves Our Environment and Starts Successful Business cases
- Best Practice Models for Sustainable Tourism
- Global Best Practice Examples

16:15 The Importance of Financing Models for Implementing Successful Sustainability

16:35 Interactive Global Discussion and Summary

17:00 Opening of the Exhibition "The Energy Globe Winners of 182 Nations"

The conference for sustainable cities and towns

With the Energy Globe World Award in Yazd, a conference for sustainable cities and towns is now also being organized for the first time. Partner of this conference in Yazd, the long forgotten birthplace of sustainability, within the framework of the UN program "United Smart Cities", with about 1000 participating cities.

The major objective is to present cities which solved important environmental problems like air pollution, waste, shortage of water and the like. By presenting these solutions on the basis of "Best Practice", cities and towns worldwide will be motivated to initiate similar activities to save our world and to preserve a livable future for the next generations.

This also implies working together by comparing and combining knowledge and implementation. Every year Yazd will present the best technologies in the conference for sustainable cities and towns. Yazd particularly stands out as a star example to illustrate that there are no borders for sustainability. Therefore let us join in, let us save our world together by taking part in this ceremony by livestream.

World Wide Distributed by Livestream

Tuesday, January 29th

09:00 Opening Energy Globe World Award

- Greetings

09:20 Category "EARTH"

- Introduction Int. member of Jury, Asia
- Presentation Nominees
- Awarding Winner Category EARTH

9:45 Category "FIRE"

- Introduction Int. member of Jury, Europe
- Presentation Nominees
- Awarding Winner Category FIRE

10:10 Category "WATER"

- Introduction Int. member of Jury, Africa
- Presentation Nominees
- Awarding Winner Category WATER

10:35 Special Award "Sustainable Cities and Communities"

- Awarding of the winners

10:50 Category "AIR"

- Introduction Int. member of Jury, America
- Presentation Nominees
- Awarding Winner Category AIR

11:15 Category "YOUTH"

- Introduction Int. member of Jury, Australia
- Presentation Nominees
- Awarding Winner Category YOUTH

11:40 Summary and Thanks to all participants

12:00 Lunch

14:00 Interactive presentation of the 182 national Energy Globe Winners

15:00 Sightseeing of the historical part of Yazd

Energy Globe World Award / 182 Nations Take Part

Today the Energy Globe with its 182 participating countries is the most significant environmental award worldwide. For approximately twenty years now the Energy Globe Award has been honoring outstanding, sustainable projects in the fields of environment and energy. All projects aiming at protecting the environment as well as improving our life situation have been submitted, all together about 20 000 "Best Practice" projects. Scientists keep warning against an ecological collapse in the next decades. Fortunately, the Energy Globe submissions already point out solutions to the most urgent and burning environmental issues which are all too evident. Consequently, high ranked personalities, like Maneka Gandhi, actively support Energy Globe.

Every year the Energy Globe World Award takes place in unique locations, like the Plenary Hall of the European Parliament. The best sustainable projects are awarded in the categories of Life, Energy, Air, Water, Earth and Youth. No location would be more suited to host the Energy Globe World Award than Yazd. This ancient city is simply the best choice. Quite a few historians claim that the idea of sustainability was invented in Yazd some hundred years ago, as for instance the climatization without energy by using wind towers shows. In a way we can say Energy Globe gets back to its very roots and celebrates Yazd as the headquarters of sustainability, together with 182 nations, which will take part.

Everybody in the world is invited to take part in this unique ceremony by livestream.

Min. Maneka Ghandi

Indian minister and chairwoman of Energy Globe jury

Energy Globe demonstrates thousands of solutions in terms of sustainability in the form of Best Practice. It is up to us to make them public and to motivate people to join in.

Mr. Mojtaba Farahmand

Mayor of Yazd

A thousand years ago our ancestors developed specific wind towers for the air-conditioning of houses and water supply system, which worked completely without emissions.

I regard this as an example of sustainability in full practice.

Mr. Christoph Leitl

Chairman of Worldchamber

Sustainability has become an issue of survival for mankind. What is a good reason for hope is that acting sustainably has already become a successful business concept for our companies.

Mr. Harald Mahrer

President of the Austrian Chamber of Commerce

The Austrian economy realized the chances of sustainable acting a long time ago so that we are global representatives in this area.

Mr. Wolfgang Neumann

Founder of Energy Globe

The Energy Globe will celebrate its 20th anniversary next year. More than 2,000 projects have been submitted, which all come up with solutions to our environmental problems.

Ms. Kari Aina Eik

Secretary General at Organization for International Economic Relations (OIER)
United Smart Cities: Implementing Smart Sustainable Cities worldwide.

In future more than two thirds of the world population will live in megacities. Exactly for this reason sustainability is a burning topic for cities.
